## Three Wheel Sweepers

### Series 900

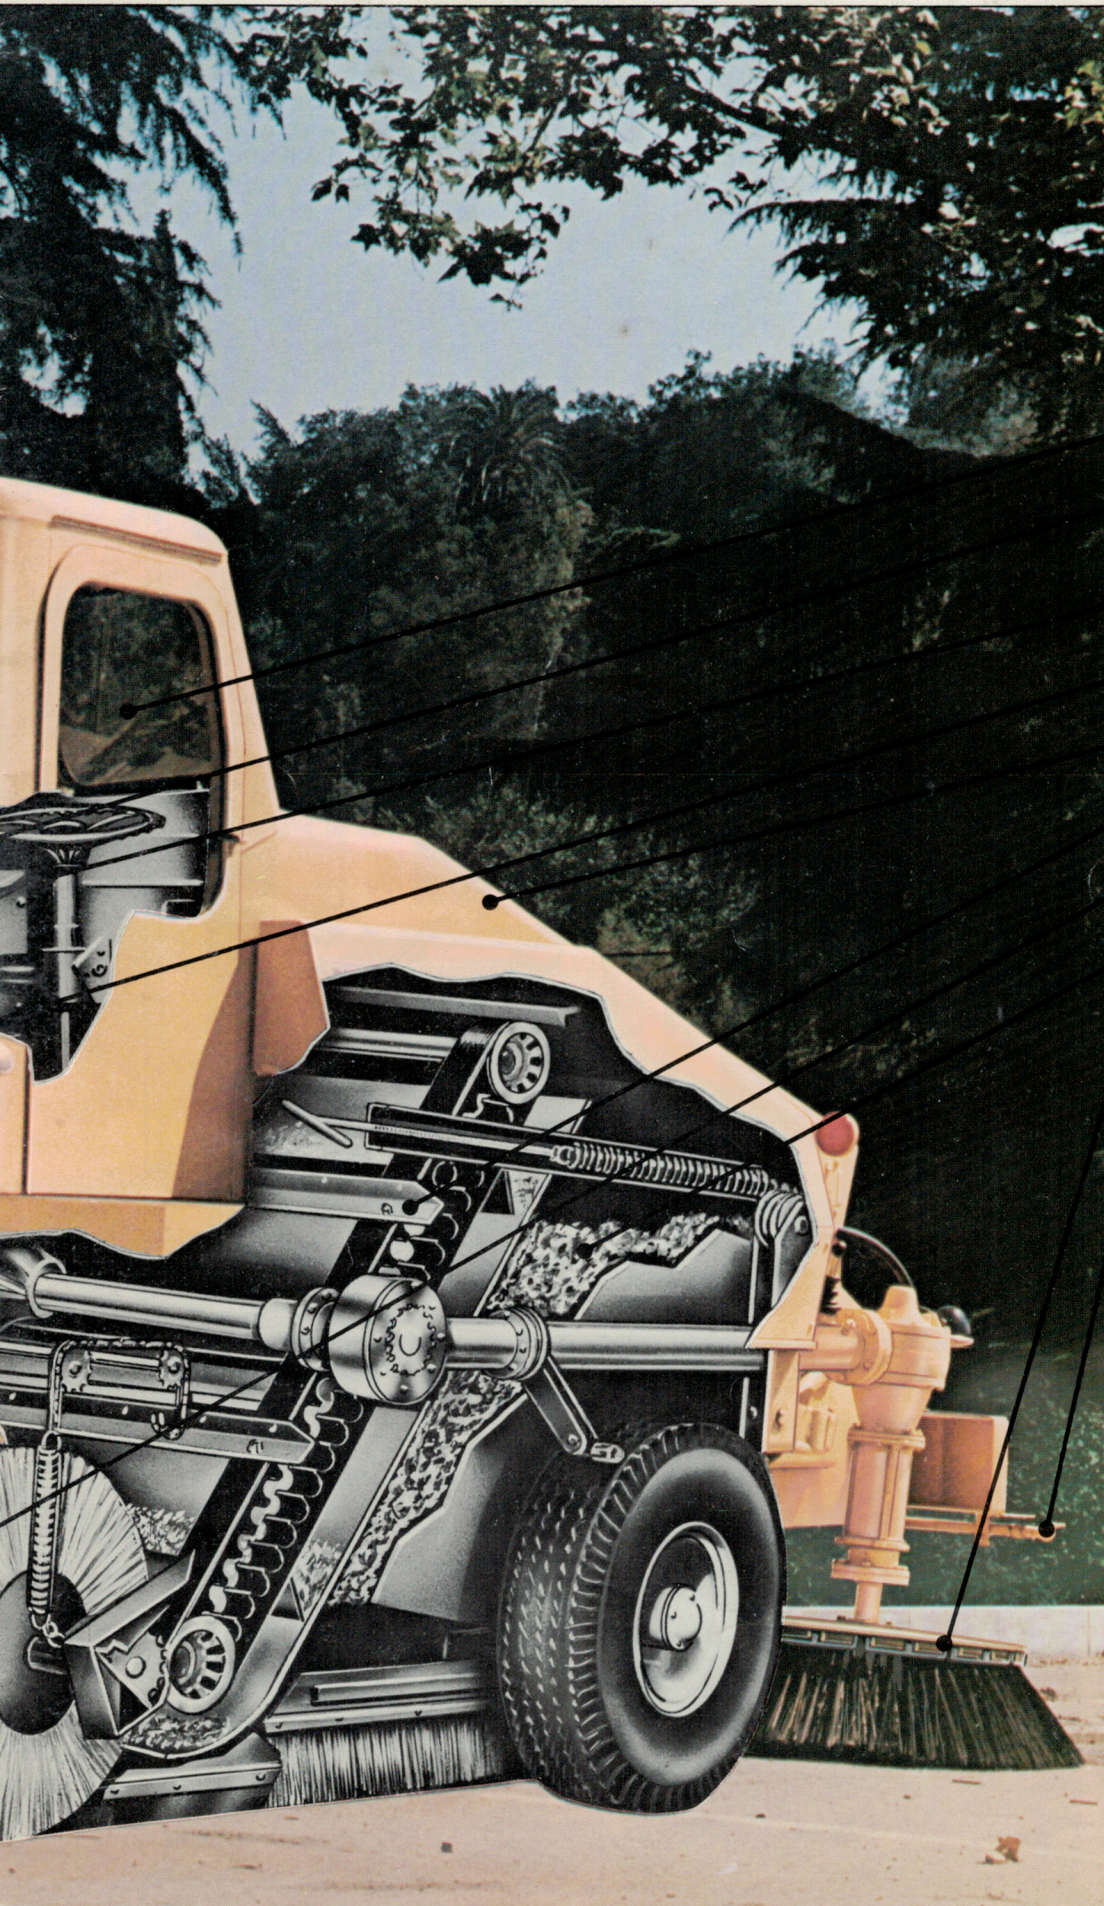

The Wayne Series 900 3-Wheel Street Sweepers have long been America's choice in municipal sweepers and the standard by which all others are judged. Such leadership in environmental equipment is not due to a single advantage, but rather their proven ability to excel in every important street sweeping function.

Here's what a 900 has going for you. It's the safest, most maneuverable street sweeper available today. Its record for durability and low maintenance is unmatched in the industry. Its sweeping versatility extends from busy downtown streets, close to parked cars, to congested areas and alleys. Its powerful V-8 engine, power steering and power brakes give the operator complete and effortless control. And it's the only 3-wheel street sweeper that is sold *completely* equipped, with features found only as options on competitive models.

The Series 900 is available with two different capacities. The *3 cubic yard Model 973* and the *4 cubic yard Model 984*. Both can travel directly to dumpsites or central disposal points thereby providing unlimited debris disposal flexibility.

Point by point, the Wayne Series 900 adds up to the obvious choice in 3-wheel sweepers.

- Operator comfort, convenience and safety.
- Two speed power take off to match broom and elevator speed to sweeping conditions.
- V-8 engine, power steering, power brakes.
- Lifetime frame for full support, perfect alignment.
- Fullview visibility, low hopper profile.
- Squeegee type elevator, with warranted rubber chain drive.
- 2500 mi. warranted Milemaster pickup broom. (U.S.A. Only)
- Work rated self-loading hopper.
- Full visibility front mounted 45" diameter gutter broom with TUF-GRIP® "5 minute" replaceable segments.
- Wayne dual water spray dust control system.

Other features, not shown, are your additional assurance of long life and efficient, economical sweeping. These include:

- Dual strut forged steel rear wheel fork
- Full width front and rear axles.
- Fingertip pickup broom adjustment from the cab for controlled pressure and reduced wear.
- Gutter broom pressure also adjustable from the cab.
- Full flow oil filter.
- Heavy duty front bumper.
- Rugged polypropylene side deflectors.
- Circuit breaker electrical system.

The more you look at a Wayne 3-wheel sweeper, the more reasons you'll see for preferring it.

The advantages depicted here are the result of 25 years of engineering development and refinement. Collectively, they are the features most demanded by municipalities to meet their sanitation requirements for efficiency, safety, economy and convenience.

Many of Wayne's standard features which were considered luxuries a few years ago have now proven to be necessities, particularly in the areas of durability, maintenance and operator comfort.

Compare the Wayne Series 900 with any other sweeper and one fact becomes very evident. A Wayne is the one that comes completely equipped. The sweeper that doesn't require costly options to do the job you bought it for.

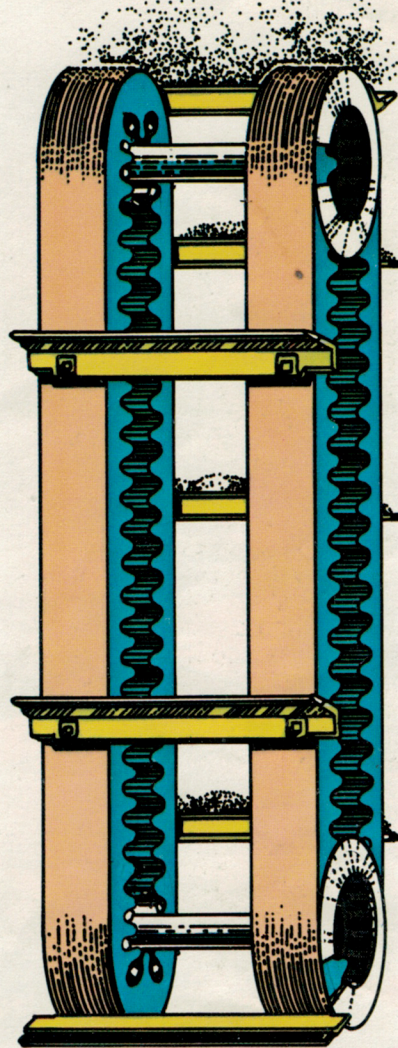

**Unmatched visibility**—front, side and rear. Low hopper profile and low cut windows let the operator keep his eye on his sweeping as well as moving vehicles and pedestrian traffic. Consider safety, and you have reason enough to specify the Wayne 3-wheeler.

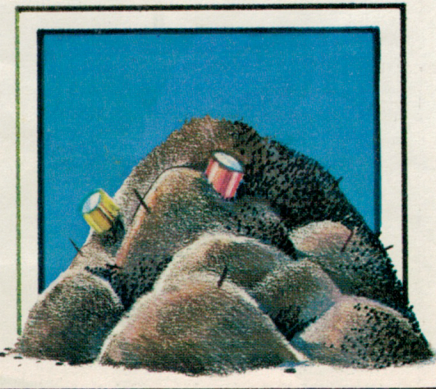

**Front mounted gutter brooms** are positioned ahead of the front wheels. The man behind the wheel can't miss what he's supposed to get; the brooms not the tires, pick up damaging debris. Along with this safety engineering comes a 2-speed power take-off for controlled sweeping under all normal or heavy conditions.

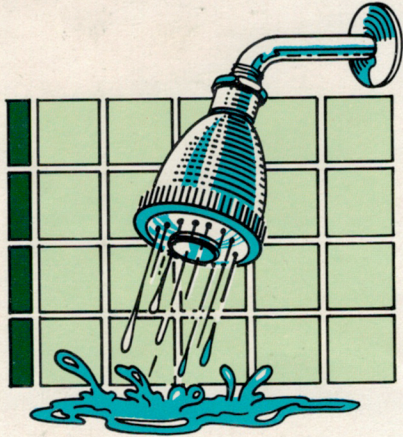

**The Elevator** is driven by Wayne designed endless rubber chains that are warranted for 10,000 miles or 24 months. The unique reversible, squeegee-type elevator self-loads the hopper to full rated capacity with debris of infinite variety or density.

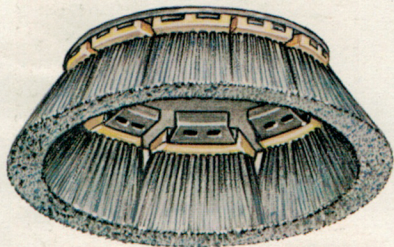

**Exclusive full loading hopper.** Only Wayne sweepers will self-load to their full rated hopper capacity—which means fewer trips to the dumpsite, more miles of sweeping for less cost per curb mile.

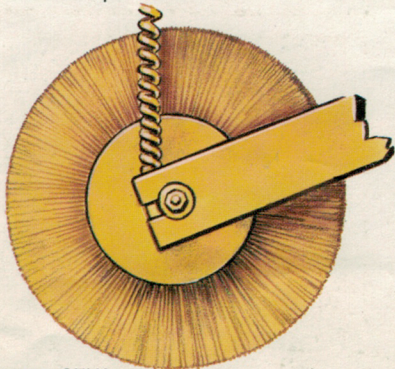

**Dual spray dust control.** Exclusive with Wayne, this system assures a perfect sweep, free of mud or streaking. Features include dual spray bar with separate control over the gutter and pickup brooms. The system includes an automatic low water level indicator light in the cab.

**Tuf-Grip Gutter Brooms.** Revolutionary design of segment and broom plate provides 5 minute change and perfect balance for superior sweeping performance. High density polyethylene segment and wire assembly locks into place with a sliding spring steel clamp.

**Milemaster Supreme Gold Seal Broom.\*** The first and only pick up broom in the industry to be warranted for 2500 miles or 2 years. Gold Seal polypropylene can save you thousands of dollars over the life of the sweeper—can be replaced in minutes without special tools.

\*U.S.A. ONLY

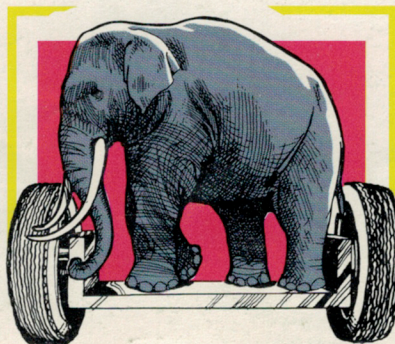

**"Turn-on-a-dime" maneuverability.** With its 14" turning radius, the 3-wheel Wayne sweeps in tight congested areas, gets between parked cars, handles dead-end streets and makes 180° turns with ease.

**Wayne's lifetime frame** (a work of art in itself) maintains perfect alignment for all sweeping assemblies, and won't crack or weaken under the strain of full hopper loads. Since the body of the vehicle does not share the stress on the frame.

**Full width front and rear axles** are positioned directly under the hopper and engine so proper weight distribution is maintained under all load conditions. You can forget about axle replacement and wheel alignment.

**A 318 cubic inch V-8.** It's standard equipment with Wayne. The most rugged in the industry, it comes with a transmission to do it justice—along with power steering and power brakes. A complete power package unmatched by any competitive sweeper.

**Operator comfort and safety.** The Wayne Series 900 has established new standards of operator comfort, convenience and safety. Fatigue-proof seat, weather-proofed cab, cab dust sealing, fiberglass engine compartment insulation, compact control console, cab lights—and much more. All of which Wayne, and only Wayne, provides as standard equipment.
