

Here it is, the TikTok video of our little mishap.

<https://www.facebook.com/watch/?v=879587862965621>

So this is how you make a “viral video”, eh?

Six hundred and five thousand viewers had a good laugh.

That’s 21,000 Lbs. of Sweeprite S3 sweeper duplicating Isaac Newton’s apple experiment. Gravity always wins they say!!

Here is the amazing part. Only two items were damaged, a plastic water fitting (\$10).

And a rubber skirt on the rear of the sweeper which could have been easily patched with duct tape.

Other than that, nothing was bent, damaged or destroyed. ( maybe with the exception of my nerves 😊)

The next morning, the unit was loaded on a step deck truck without incident. This time we used a twin axel a flatbed tow truck to help lift the sweeper.

Sweeper Works of San Jose, Ca. is now offering demonstration with this “flying” S3.

It’s a beast!!! You simply can’t beat the power of four hydraulic pumps in a milling operation.

Proof once again that a twenty year old Sweeprite is just “worn in”.

Be safe, take care.
