

GPS and Sweeping Contractors

What is GPS and how will it benefit a sweeping contractor?

GPS, what is it and how does it work?

There are 12 government-owned satellites:

- Developed for military use and available for commercial use free of charge
- Provides location anywhere in the world by triangulation of any three satellites

What can GPS do, and how is it utilized?

- Pinpointing account locations
- Tracking vehicle activity and routes

How can GPS be utilized to improve a sweeping operation?

- Improve driver productivity
- Reduce driver overtime
- Hold drivers more accountable for their actions
- Allow you to increase driver pay and reduce turnover
- Monitor speed, stop times, and routes driven.
- Provide historical information and service verification

GPS systems reduce operating costs by:

- Vehicle event tracking
- Automated billing
- Enhanced operator training with job standards
- Enhanced quality control with job standards
- Automated vehicle maintenance workorders
- Provide exact job costing information
- Improve route scheduling
- Reduce office staff
- Provide vehicle performance information
- Leverage management's time and capability so more activities may be managed
